

1st European Midwest Micro/Macro Conference (EM³C)

Call for Papers

On **October 05-06, 2018**, the 1st European Midwest Micro/Macro Conference (**EM³C**) will take place in **Bonn**. The conference will focus on the role of microdata for macroeconomics. Microdata for the purposes of **EM³C** is broadly defined and includes (but is not limited to) survey data, administrative data, experimental data, expectations data, etc. Work with new, previously unexplored microdata is especially welcome. The macro part of **EM³C** is also broadly defined and includes growth and business cycle topics, fiscal and monetary policy, consumption, investment, labour topics, price setting, sentiment and uncertainty research, etc.

The conference is hosted by the Institute of Macroeconomics and Econometrics of Bonn University. **EM³C** is a joint initiative of Rüdiger Bachmann (University of Notre Dame and CEPR), Scott R. Baker (Northwestern University Kellogg School of Management), Kyle Herkenhoff (University of Minnesota), Kurt Mitman (Stockholm University Institute for International Economic Studies and CEPR), and Michael Weber (The University of Chicago Booth School of Business) and the local organisers.

The deadline for submission of papers or extended abstracts is **31 May 2018**. Preference is given to completed papers over abstracts. **Submissions must be done electronically using the following email:** rbachman@nd.edu with just EMMMC in the subject line (there is no need for further text in the body of the email). Authors of submitted papers will be notified before **30 June 2018**.

There is no travel funding available, but up to 2 hotel nights (for overseas participants up to 3 hotel nights) will be covered. Financial support is provided by the ERC, the research training group “Macroeconomics of Inequality”, and the Hausdorff Center of Mathematics of Bonn University.

Further questions regarding **EM³C** can be addressed to the conference organisers:

Rüdiger Bachmann
University of Notre Dame
and CEPR
